The ISO Survey – 2007

ISO and *The ISO Survey*

ISO is the world's largest developer of voluntary International Standards for business, government and society. Its portfolio in September 2008 comprised more than 17 400 standards that provide practical solutions and achieve benefits for almost every sector of economic activity and technology.

Of these, ISO 9001:2000 and ISO 14001:2004, which give the requirements for, respectively, quality management and environmental management systems, are among ISO's most well known and widely implemented standards ever. They are used worldwide by businesses and organizations large and small, in public and private sectors, by manufacturers and service providers, in all sectors of activity.

Many users decide to have their management systems independently audited and certified as conforming to the standards. Certification is not a requirement of the standards themselves, which can be implemented without certification for the benefits that they help user organizations to achieve for themselves and for their customers. Nevertheless, many thousands of organizations have chosen certification because of the perception that an independent confirmation of conformity adds value.

ISO itself does not perform certification to its standards, does not issue certificates and does not control certification performed independently of ISO by other organizations. However, it frequently receives requests for information on the number of certificates and this led the organization to undertake *The ISO Survey*, which is now in its 15th year. ISO provides the basic results free of charge as a public information service on its Web site: www.iso.org

The collection and compilation of data for the 2007 survey was outsourced for the fourth consecutive year to the market research firm ACNielsen of Vienna, Austria. The data was then analysed by ISO Central Secretariat.

Standards covered in this edition

This edition of the survey gives the worldwide panorama of certification to ISO management system standards at the end of 2007. The standards covered are:

- ISO 9001:2000 for quality management systems
- ISO 14001:2004 for environmental management systems.

For the fourth consecutive year, the survey includes certification data on two ISO standards that include the requirements of ISO 9001:2000, plus sector-specific requirements:

- ISO/TS 16949:2002 for the automotive sector
- ISO 13485:2003 for medical devices.

For the second year, the survey includes data on ISO/IEC 27001:2005, which provides the requirements for information security management systems, and whose requirements are aligned with ISO 9001:2000 and ISO 14001:2004.

About ACNielsen

ACNielsen is the leading global provider of marketing research information services, analytical systems and tools, and professional client services that help clients win in the market-place. The clients of ACNielsen include the world's leading manufacturers and retailers of consumer packaged goods, as well as companies that market many other types of consumer products and services. Clients work with ACNielsen to measure their market performance, to analyse market dynamics, to diagnose and solve marketing and sales problems, and to identify and capture growth opportunities. ACNielsen's operations span more than 100 countries. Founded in the USA in 1923 by Arthur Charles Nielsen, Sr., ACNielsen, the Austrian office was opened in 1961, initially carrying retail measurement. In 1990, consumer research was added to the range of services offered by the Austrian office.

How *The ISO Survey* is carried out

The ISO Survey has been carried out 17 times since the first in January 1993. The survey is now published on an annual basis by ISO Central Secretariat (ISO/CS). For this 2007 edition, the principal sources of the data are certification bodies. ISO/CS would like to thank all sources for their participation and assistance.

4

Only certification bodies accredited by national members of the International Accreditation Forum (IAF – www.iaf.nu) have been used as sources. The IAF is an international association that represents the national accreditation bodies set up in many countries to verify the competence of certification bodies. Therefore, the survey does not cover certificates issued by certification bodies accredited by organizations other than members of the IAF, or not accredited at all.

Many of the certification bodies which contribute data are business competitors of each other. For this reason, the data supplied is treated by ISO/CS as confidential in that it is not linked in the published survey to the certification body which supplied it. This rule is applied in order to avoid the data being used by competitors as business intelligence about their rivals. ISO/CS will not therefore comply with requests to identify the market share of certification bodies, or “the top 10 certification bodies in the world”, or similar.

As pointed out above, the survey is carried out once a year and ISO/CS does not maintain a database or running total which would allow it to meet requests for updates between publications of the survey.

It should be noted too that the data supplied is of the numbers of certificates – the individual organizations which hold certificates are not identified. Therefore, ISO/CS cannot satisfy requests for lists of certified organizations in a particular country or business sector.

The survey is of the numbers of certificates, not the numbers of sites covered by any one certificate. Although ISO/CS requests the suppliers of data to distinguish between single-site and multiple-site certificates, and includes this information when available in specific tables, not all suppliers provide such information.

Background to *The ISO Survey – 2007*

In line with the ISO 9001 requirement for continual improvement, a major effort has been launched with the 2007 survey to improve the reliability of the data by harmonizing the collection methodology.

In previous years, the survey data was collected from a variety of sources including ISO national member institutes, accreditation bodies, certification bodies and regional certification databases. A disadvantage of this approach was the resulting mixture of data from primary sources and secondary sources. Compiling data from secondary sources increased the possibility for error, particularly as these sources themselves may use different methodologies for compiling data.

To reduce such problems to the minimum, the data collection method for the 2007 survey has been harmonized so that, whenever possible, it has been obtained from the primary sources, the certification bodies that actually issue certificates.

Because of this harmonization of methodology, the numbers of certificates for a number of countries may show some significant variations when the 2007 figures are compared with the 2006 edition of the survey. The countries principally concerned in this edition are Australia, Canada, Mexico, New Zealand and the USA. For future editions, the harmonized methodology will facilitate the comparison and consistency of the survey data.

In addition to this change in methodology, other factors may cause figures to be revised from one edition of the survey to another, including the following:

- The responsiveness of certification bodies to requests for data varies. Not all submit data. Among those who do, the quantity and quality varies. From time to time, mistakes or additional data come to light and the figures are adjusted accordingly in subsequent surveys.

Enquiries about *The ISO Survey* should be addressed to :

Ms. Joyce Bleeker

ISO Central Secretariat

E-mail bleeker@iso.org

- The responsibility for collecting figures within the different source organizations may be transferred from one person or department to another and, with it, their methodology for compiling the data may vary. As a result, country totals given in previous surveys may be revised retrospectively and totals may, therefore, not always tally up from one survey to another.
- A number of joint assessment arrangements are in operation by certification bodies. These are taken into account when known, but a small degree of double counting no doubt occurs. Again, when double counting becomes apparent, totals are adjusted.

In the 2007 edition of the survey, the following figures for 2006 have been revised:

- Afghanistan (ISO 13485:2003)
- The Netherlands (ISO 13485:2003)
- Sweden (ISO 9001:2000, ISO 14001:2004 and ISO 13485:2003)
- Switzerland (ISO 14001:2004).

The condensed version of the survey, with tables giving the world, regional and country totals of certificates is accessible free of charge on ISO's Web site (www.iso.org), plus graphics showing the rise in certificates over the different cycles. The paper version of the complete survey, including a CD-ROM with additional information regarding breakdowns of the number of certificates per country by industrial sector is available at a cost of 48 Swiss francs from the Central Secretariat (sales@iso.org), and from ISO's national member institutes (their contact details are provided on ISO's Web site).

The 2007 survey gives detailed ISO 9001:2000 certification breakdowns from December 2003. To facilitate comparison and analysis, the 2006 edition, which gives the figures for 2001 to 2006, is retained on the ISO Web site, along with the 2000 edition which gives figures for previous ISO 9000 versions right back to the first survey in January 1993 up to the end of 2000. Figures for ISO 14001 prior to 2003 can also be found in these retained editions on the ISO Web site.

Certification

Both the ISO 9000 and ISO 14000 families include a single standard – respectively, ISO 9001:2000 and ISO 14001:2004 – that gives the requirements for a management system and against which the system can be “certified”. This means that the system has been audited against the requirements of the standard by a specialized “certification” or “registration” body which, if the requirements have been met, issues a certificate of conformity, known as an ISO 9001:2000 or ISO 14001:2004 certificate.

Certification is not a requirement of any of the standards in the ISO 9000 or ISO 14000 families, including ISO 9001:2000 and ISO 14001:2004. Neither is certification a requirement of the other ISO management system standards highlighted in this survey – ISO/TS 16949:2002, ISO 13485:2003 and ISO/IEC 27001:2005.

An organization can implement the standards for their internal and external benefits without seeking certification. The decision whether or not to have the management system certified after an independent audit is one to be taken on business grounds – for example, if it is a customer requirement, or a regulatory requirement in the organization's area of activity.

The other standards in the ISO 9000 and ISO 14000 families address specific issues in quality and environmental management, or provide tools, such as for auditing management systems. The greatest value can be obtained by organizations when they implement these in synergy with their management systems. In relation to ISO 9000, more information on this subject can be found on the ISO Web site in the “Management standards” section in the electronic brochure, *Selection and use of the ISO 9000 family of standards*.

ISO 9001:2000, Quality management systems – Requirements with guidance for use

Up to the end of December 2007, at least 951 486 ISO 9001:2000 certificates had been issued in 175 countries and economies.

The 2007 total represents an increase of 54 557 (+6 %) over 2006, when the total was 896 929 in 170 countries and economies.
